

Event Medical Services

We care, everywhere.

WorkCare provides professional, reliable on-site care at large-scale events throughout the U.S.

Major events with large crowds require seamless coordination to ensure things run smoothly. Our Event Medical Services team fills a critical role at events by supporting the health, safety, and well-being of everyone involved – from setup to breakdown.

On-site providers deliver comprehensive medical care for talent and executives, employees and crews, third-party vendors, guests, and attendees. We staff medical personnel at events including televised sports, concerts, conventions, and corporate gatherings.

WHAT WE PROVIDE

The WorkCare event Medical Services team provides:

- Triage, first aid, and non-emergency care for work-related injuries and discomfort
- Illness support, including non-prescription remedies for headache, stomach upsets, extreme temperature exposures, and stress-related symptoms
- Follow-up care for injury, illness, or personal health concerns
- Guidance on wellness, injury and illness prevention, and disease management

BENEFITS FOR EVERYONE

On-site medical coverage is a practical, cost-effective alternative to off-site care or an emergency response for non-emergent incidents.

WorkCare's occupational health physicians are available 24/7 for telehealth consultations. Every medical encounter is documented, allowing clients to track incidents and take corrective actions without viewing protected personal health information.

Our integrated support system helps event sponsors:

- Minimize health and safety exposure risks
- Limit unnecessary off-site medical care encounters
- Safely return employees to work after an incident
- Avoid disruptions at time-sensitive events

WHAT WE DO

- ➔ Collaborate with occupational health and safety professionals, producers, and event managers to align services with site-specific needs.
- ➔ Limit or extend Event Medical Services coverage for client employees to include subcontractors, vendors, and attendees.
- ➔ Mitigate security, privacy, and liability risks for all stakeholders by providing a professional, on-site clinical presence.
