Flu Vaccinations

Protect employee health. Save lives this flu season.

WorkCare provides flu shots in the workplace and makes referrals to mobile medical vendors and off-site providers for vaccinations.

The U.S. Centers for Disease Control and Prevention recommends annual flu vaccination for all adults, unless they have a condition that precludes it.

FLU VACCINATION OPTIONS FOR INDIVIDUALS AND EMPLOYEE GROUPS

1. Conveniently located off-site clinics or pharmacies in WorkCare's provider network.
2. Existing on-site clinics staffed by WorkCare.
   - Options include employer purchase of vaccine and no additional charge when WorkCare on-site nurses administer shots.
3. Existing on-site clinics operated by WorkCare using temporary staff.
   - There may be a charge for per-diem staff, if needed.

DID YOU KNOW?

- The 2026-27 flu vaccine protects against three types of viruses that are expected to be in circulation.
- Vaccination helps lower sickness absence rates and prevent production disruptions.
- Vaccination is estimated to have reduced outpatient visits by up to 36% and hospitalizations by 31% last season.
- While vaccination is not 100 percent effective, it helps reduce illness severity and recovery time.
- Wearing a mask, washing hands, and staying home when ill helps prevent the spread of flu and other contagious diseases.
- Vaccination does not cause illness; some people will experience temporary symptoms while their body builds antibodies to fight viruses.
- Annual flu shots are recommended as vaccine potency wanes over time.
- Flu vaccine is safe for pregnant and breastfeeding women. Protective antibodies are passed to infants.

4. The WorkCare team assists with flu prevention campaign planning and logistics, provides qualified personnel to administer shots, and manages related documentation at on-site locations.
